`md2pdf`

Convert Markdown to professional PDF instantly.

Built with Vivliostyle. Features Prism.js syntax highlighting and built-in Traditional Chinese typography.

✨ Features

- **Perfect Typography**: Pre-configured with Noto Sans TC, Noto Serif TC, and JetBrains Mono for a clean, modern aesthetic.
- **Vibrant Syntax Highlighting**: Built-in Prism.js syntax coloring powered by the gorgeous **Catppuccin Mocha** palette. Handled seamlessly at build-time for pixel-perfect PDF rendering.
- **Premium Developer UI**: Thoughtfully designed elements—from elegant callouts and blockquotes to balanced spacing—making your technical documents feel like professional publications rather than raw markdown.
- **Print Ready**: Auto-prevents awkward page breaks inside code blocks, tables, and paragraphs.
- **Offline & Cross-Platform**: Works fully offline after the first run (downloads headless Chromium automatically).

📄 Example Output

Curious what the result looks like? Check out README.pdf — this README itself, converted with `md2pdf`!

🛠️ Installation

Requires Node.js 18 or newer.

```
# Clone the repository
git clone https://github.com/moon-jam/md2pdf.git
cd md2pdf

# Install dependencies and link it globally
npm install
npm link
```

💻 Usage

Run the tool from any directory against any Markdown file!

```
# Basic usage (outputs 'report.pdf' in the same directory)
md2pdf report.md

# Live Preview & Watch Mode (auto-reloads on save)
md2pdf report.md --watch

# Custom output path
md2pdf report.md -o ~/Documents/final_report.pdf

# Change Paper Size (Default: A4)
md2pdf report.md --size Letter

# Bring your own CSS stylesheet
md2pdf report.md --style my_theme.css

# View all options
md2pdf --help
```

Options

Flag	Alias	Description	Default
`--output`	`-o`	Output PDF file path	Same as input file with `.pdf`
`--watch`	`-w`	Open browser and live-reload on file changes	`false`
`--style`		Custom CSS stylesheet file path	Bundled `style.css`
`--size`		PDF paper size (A4, Letter, B5, etc)	`A4`
`--title`		Title of the generated PDF document	Base filename
`--language`		Language metadata code	`zh-TW`
`--page-numbers`	`-p`	Show page numbers in the footer	`false`

💡 Tips & Tricks

Forcing a Page Break

If you need to manually split content to a new page, simply type:

```
<!-- pagebreak -->
```

md2pdf will automatically convert it into a seamless page split during rendering.

🎨 Modifying the Theme

Want to change how things look? Just open `style.css` in the project root and tweak to your heart's content. Changes apply instantly on your next `md2pdf` run!
